AMENDMENT UNDER 37 C.F.R. § 1.111 Attorney Docket No.: Q76689

Application No.: 10/564,821

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the

application:

LISTING OF CLAIMS:

1. (original): A method for producing a solid electrolytic capacitor, wherein a solid

electrolytic capacitor element comprises an anode body composed of a material containing at

least one member selected from a group consisting of an earth-acid metal, an alloy comprising an

earth-acid metal as the main component, an electrically conducting oxide of an earth-acid metal

and a mixture of two or more thereof, a dielectric layer formed on the anode body by electrolytic

oxidation (electrochemical formation) and comprising an oxide as the main component, a

semiconductor layer formed on the dielectric layer, and an electrically conducting layer stacked

on the semiconductor layer, and the solid electrolytic capacitor element is subjected to molding

with a resin, curing and then voltage applying (aging) treatment, which method comprises

repeating a step of leaving the resin-molded body to stand at a temperature of 225 to 305°C and a

step of aging it are sequentially repeated twice or more after the above steps of molding with

resin and curing.

2. (original): The method for producing a solid electrolytic capacitor as claimed in

claim 1, wherein the step of leaving the resin-molded body to stand at a temperature of 225 to

305°C is a step of performing the standing at a temperature of 225 to 305°C multiple times.

3. (original): The method for producing a solid electrolytic capacitor as claimed in

claim 1, wherein the aging step after leaving the resin-molded body to stand at a temperature of

225 to 305°C is a step of cooling the resin-molded body to a temperature of 200°C or less to

cold-resistance temperature of the capacitor and then applying a voltage.

2

AMENDMENT UNDER 37 C.F.R. § 1.111 Attorney Docket No.: Q76689

Application No.: 10/564,821

4. (previously presented): The method for producing a solid electrolytic capacitor as claimed in claim 1, wherein the earth-acid metal is tantalum.

5. (previously presented): The method for producing a solid electrolytic capacitor as

claimed in claim 1, wherein the earth-acid metal is niobium.

6. (previously presented): The method for producing a solid electrolytic capacitor as

claimed in claim 1, wherein the electrically conducting oxide of an earth-acid metal is niobium

oxide.

7. (canceled).

8. (canceled).

9. (canceled).
